Bounded RL vs controls (all from the dev-selected M1 checkpoint; sel = best 6 of 32 by reward, xSFT = extra SFT, fSFT = reward-filtered SFT) — mean over seeds [0, 1, 2], group-bootstrap 95 % CI — development set (checkpoint selection; not held-out)
clean joint minADE@6 (m)
core-suite joint minADE@6 (m)
overlap, own 6 outputs (%)
overlap, 32-sample pool (sel: unselected pool) (%)
vehicle offroad fraction (%)
kinematically implausible (%)
diversity: mean pairwise FDE (m)
